PROFILE

I am a passionate Computer Science student with a strong interest in web development, artificial intelligence, and digital marketing. I enjoy building modern, user-friendly websites and exploring AI tools to create innovative content like videos and images. With a problem-solving mindset, I constantly strive to learn and apply new technologies. My goal is to grow into a full-stack developer while also excelling in digital marketing.

PROJECTS

Smart Classroom System

- Developed a smart attendance management system using QR code technology to eliminate proxy attendance.
- Implemented time-restricted QR scanning to ensure real-time student presence verification.
- Designed an integrated chatbot system for seamless student-teacher communication.
- Built assignment tracking module for submission monitoring and deadline management.
- Created performance analytics dashboard to track student progress and engagement.
- Structured backend using Python and databases (SQL + MongoDB) for efficient data handling.
- Planned future enhancements with AI-based attendance insights and predictive analytics.

SpeedSpotMapper

- Developed a network analysis tool to measure real-time upload and download speeds.
- Implemented functionality to identify optimal signal strength locations within a 5-meter radius.
- Designed a system to recommend the best SIM/network provider based on performance data.
- Integrated location-based navigation to guide users to the strongest signal spot.
- Focused on improving user experience with interactive UI and real-time feedback.
